

Repository family and code ownership

Shared scientific infrastructure lives in the foundation package; each note owns its method-specific layer.

Network Control and Differential Games
cybercontrol: equations, graphs and numerics
FBSM, metrics, run records and plotting
first: `python -m cybercontrol smoke`
output: `artifacts/smoke/run_manifest.json`

imports cybercontrol

Cyber Control and Game Learning
cybergames: environments and DDQN/PPO
CTDE, MAPPO and game evaluation
first: `python -m cybergames smoke`
output: `artifacts/smoke_summary.json`

imports cybercontrol

Physics-Informed Cyber Control
cyberpinn: inverse PINN and PIDL
neural control and PMP-informed residuals
first: `python -m cyberpinn smoke`
output: `artifacts/smoke_summary.json`

Common model vocabulary: SIR/SIPS states and heterogeneous parameters
Shared semantics: sampled actions, impulses and reset maps
